Storm Window Measuring Guidelines

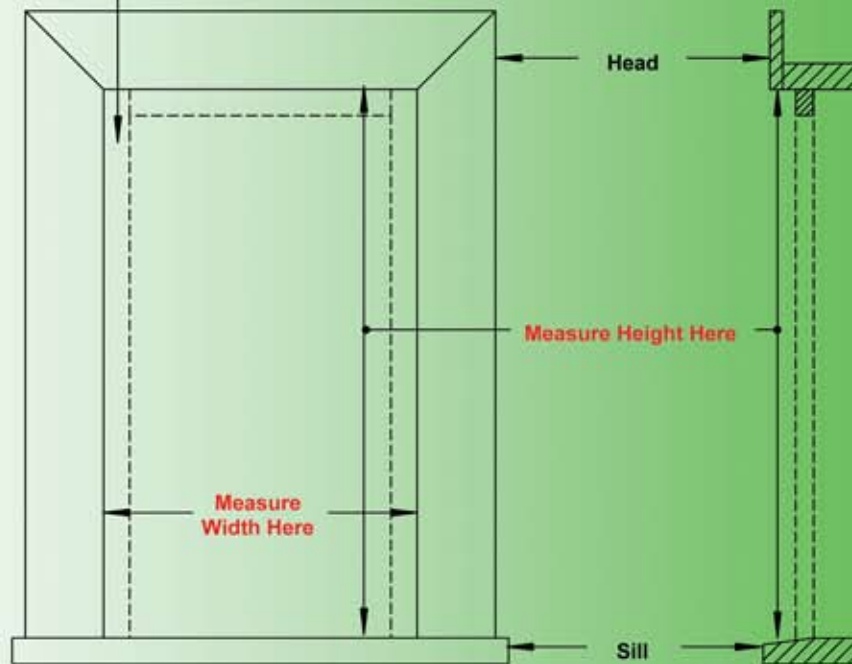

- ◆ When ordering windows, always specify the kind of casing (Eastern or Western), and the width of the opening followed by the height of the opening.
- ◆ If a Blindstop exists inside the opening (see dotted line at right) the casing is Western style.
- ◆ If no Blindstop exists, the casing is Eastern style.
- ◆ In either case, measure openings in the same manner. (See diagram at right.)

Western - Window mounts inside casing against Blindstop.

Blindstop (Western Casing Only)

Eastern - Window mounts onto outside of casing.
